

Create a Thesis Statement for the 3 of the following 4 prompts (and yes, these are crazy. But have some fun and create a thesis.)

Analyze which you feel have a better chance of taking over the world: zombies or pirates?

Despite the higher cognitive abilities of pirates, zombies are much more capable of expanding and establishing dominance over the world's peoples through their numbers and ability. Zombies are able to attain much higher numbers than Pirates through infecting others, either through biting or airborne disease, while Pirates are limited to deserted sailors who have turned to lives of crime; zombies can win through sheer numbers. Further, while a Zombie insurrection could arise and grow from a single zombie in a quick manner, any Pirate attempts would likely be subjugated by the world's naval forces before they could make their way towards taking over any significant population centers. Due to the nature of how Pirates operate (on the water) and their limited numbers, Zombies have the advantage with proximity to population centers and with their numbers and ease of spreading.

Determine whether you would rather find yourself in the world of Harry Potter (during the last two books) or The Hunger Games? Justify your answer.

Evaluate which scenario you would prefer - attacked by one horse-sized duck, or one hundred duck-sized horses?

A single horse-sized duck does not pose the same level of threat as one hundred duck-sized horses when considering their harsh bite and their sheer numbers being able to potentially overpower a single person, as flocks of ducks and gaggles of geese can. Evading a single horse-sized duck would be easier to do, and an individual would be less likely to be overwhelmed. Also, the horse-sized duck could not continue pursuit in to small areas where an individual could hide. A horse-sized duck's size inhibits it, it can't simply overwhelm an individual, and it being singular lends itself to being less of a threat than a large number of duck-sized horses.

Evaluate which superpower would be the better one to have - the ability to fly or read minds.

Possessing the ability to read minds would lend itself to much better returns than the ability to fly. Being able to fly, while intriguing, is limited in its scope for purposes such as travel. The ability to read minds could earn one a pretty penny should it be used wisely. Accurately predicting the behavior and decisions of others would enable an individual to be prepared for all scenarios. Guesswork is eliminated from all interpersonal communication. Mind-reading could help to know what stocks to trade or what cryptocurrency to buy into if an individual read the mind of a good trader. The ability to read minds allows for accurate

predictions, easier social operation, and financial gain in the stock market and cryptocurrency.
